

SMYD3

PDB:3MEK

Revision

Revision Type:created

Revised by:created

Revision Date:created

Entry Clone Accession:GI:19570495

Entry Clone Source:MGC

SGC Clone Accession:

Tag:N-terminal: His-tag with integrated TEV protease site: MHHHHHHSSGRENLYFQG

Host:*E. coli* BL21 (DE3) codon plus RIL (Stratagen)

Construct

Vector:pET28-MHL

Growth

Medium:M9 minimal medium in the presence of 50 µg/ml of kanamycin

Antibiotics:

Procedure:SMYD3 was expressed in *E. coli* BL21 (DE3) codon plus RIL in M9 minimal medium in the presence of 50 µg/ml of kanamycin. Cell were grown at 37°C to an OD₆₀₀ of 0.8 and induced by isopropyl-1-thio-D-galactopyranoside (IPTG), final concentration 1 mM, in the presence of 50 mg/L of SeMet and incubated overnight at 15°C.

Purification

Procedure

The crude extract was cleared by centrifugation. The clarified lysate was loaded onto 5 ml HiTrap Chelating column (Amersham Biosciences), charged with Ni²⁺. The column was washed with 10 CV of Wash Buffer, and the protein was eluted with Elution Buffer. The protein was loaded on Superdex200 column (26x60) (Amersham Biosciences), equilibrated with 20 mM Tris-HCl buffer, pH 8.0, and 150 mM NaCl, at flow rate 4 ml/min. The protein was further purified to homogeneity by ion-exchange chromatography on Source 30Q column (10x10) (Amersham

Biosciences), equilibrated with buffer 20 mM Tris-HCl, pH 8.0, and eluted with linear gradient of NaCl up to 500 mM concentration (20CV). Purification yield was 6 mg of the protein per 1L of culture.

Enzymatic treatment: TEV cleavage

Extraction

Procedure

Cells were harvested by centrifugation at 12, 227 Xg. The cell pellets were frozen in liquid nitrogen and stored at -80°C. For the purification, 11 g of the cell paste was thawed and resuspended in 110 ml lysis buffer with protease inhibitor (1mM phenylmethyl sulfonyl fluoride, PMSF). The cells were lysed by passing through Microfluidizer (Microfluidics Corp.) at 20,000 psi.

Concentration: 15 mg/ml

Ligand

MassSpec: expected MW = 49920.25 Da, measured MW= 49920.7725 Da

Crystallization: Purified SMYD3 (10 mg/mL) was complexed with S-adenosyl-L-methionine (SAM) (Sigma) at 1:10 molar ratio of protein:SAM and crystallized using the sitting drop vapor diffusion method at 20°C by mixing 1 µl of the protein solution with 1 µl of the reservoir solution containing 20% PEG 3,350, 0.2 M magnesium formate.
